

# INCIDENTAL SPILLS

---

## STOP

Ask Yourself:

- Is the spill incidental or does it create an emergency?
- Is it safe for me to clean up the spill?

## PROTECT

- Do I need any PPE? Refer to the SDS.
- Do I need to protect sensitive areas like drains or electrical panels?

## ATTACK

- Contain the spill
- Use absorbents, vacuums, or other tools to clean up spilled materials - refer to the SDS for specifics.
- Restore the area to pre-spill conditions to reduce the chance of slips and falls - wash the spill area with mild soap and water.
- Collect and store spilled material where possible.

## REPORT

- Even if it was a small spill, inform a supervisor and EHS so that response materials can be restocked and applicable reports filed.

## W.I.N

- If you don't know what's spilled, aren't trained, or don't have the right tools, remember to WIN.
- Warn Others
- Isolate the area
- Notify a supervisor and EHS
